GDP growth averaged 6. After the Second World War trade started growing .

Likewise, he assigns importance to the protracted civil conflict and their Independence did not necessarily bring political stability to Latin American countries, with the exception of Chile where a unitary republic was in place already by That there were already floating exchange rates between major currencies certainly facilitated the adjustment. Among the potential growth-enhancing factors that come from greater global economic integration are: Competition firms that fail to adopt new technologies and cut costs are more likely to fail and to be replaced by more dynamic firms ; Economies of scale firms that can export to the world face larger demand, and under the right conditions, they can operate at larger scales where the

price per unit of product is lower ; Learning and innovation firms that trade gain more experience and exposure to develop and adopt technologies and industry standards from foreign competitors.

Cases are not necessarily made public, and thus it is not possible to assess how points stand .
