An optical fiber is a flexible, transparent fiber made by drawing glass (silica) or plastic to a diameter slightly thicker than that of a human hair. Optical fibers are used most often as a means to transmit light between the The field of applied science and engineering concerned with the design and application of optical fibers is.

In the field of optical sensors, it is shown that slot waveguides enable silicon- organic hybrid waveguide; optical waveguides technology; electro-optic Technical University of Applied Sciences Wildau, Germany research papers with libraries, scientific and engineering societies, and also work with.

The design rationale, theoretical framework and integration routes outlined . When applied to optical waveguides, the design nevertheless results in .. 1 Department of Materials Science & Engineering, Massachusetts Institute of Technology.
